

**Abstract of the Article**  
**“Some Theoretical Issues of Manufacturing-Logistic Relations Management under the Conditions of Cooperative Ties Forming”**  
**by K. Tankova, O. Bahurets**

The topicality of the research is determined by the fact that present stage of manufacturing-economic relations development makes it necessary to direct all participants of these relations toward complete final consumer demands satisfaction by means of creating unified channels of material and technical resources movement. It should also be mentioned that providing cooperation principles as well as basic business processes synchronization are nowadays getting more practical value which make it possible to unite enterprises and organizations in one cooperative manufacturing-logistic relation. The same is true for all actions description dealing with obtaining applications for all participants of such relations, mainly suppliers, producers, distributors and final consumers.

The aim of the research is developing of theoretical issues, grounding of scientific and methodological approaches for creating optimization models of manufacturing-logistic relations while forming cooperative ties.

The object of the research is the process of cooperative ties forming.

The subject of the research is theoretical and methodological issues that make ground for manufacturing-logistic relations optimization model while forming cooperative ties.
