

Abstract of the Article

"Organizational and Economic Support of the Introduction of Logistic Approach to the Enterprise Management"

by I. Dzyobko

Necessary organizational and economic support of the introduction of logistic approach to the enterprise management is considered.

A specific sequence of actions for the introduction of organizational changes, which implementation will lead to the harmonious operation of the enterprise's business-processes, taking into consideration advanced logistics ideas is represented.

Each stage of the suggested algorithm is supplied with a description. It is also proved that after the introduction and adjustment of a new management system, taking into account its optimizing characteristics, begins a continuous cyclic process of self-adjustment, self-improvement and development in the life cycles of the broadened reproductive activity.
