

Abstract of the Article
“Strategy of an Effective Uses of Resources at the Enterprises
of Mining branch”
by Parshin Y. I.

Rational distribution of resources is the major economic problem of the present. Efficiency of functioning of a coal-mining complex depends on distribution of resources between the enterprises.

It is possible to present enterprise development as set of discrete processes with the set ultimate goal which proceed in the conditions of limited time and the limited industrial resources. Distribution of the limited industrial resources between the enterprises of the large company and a finding of such variant of distribution which will provide maximum efficiency, is an actual economic problem. Article purpose is working out of an effective method of distribution of industrial resources in separate association or the company.

In article the method of distribution of resources between the enterprises of the company (association) on the basis of efficiency functions is offered. The expediency of such distribution is economically proved. On an example of three mines of association of Open Society "Pavlogradugol" distribution of industrial resources has been executed.
