### **“Conceptual Principles of Scientific and Technical Management of Regional Innovative Development”**

**By Y. V. Ponomarenko, O.V. Annenkova**

One of the most important issues of the economic conditions transformation is formation of a weighed regional policy. It requires the objective conceptual approach to the scientific and technical management of regional innovative development. The main issue of this approach is the strategic and tactical aspect grounding (the forecast of regional innovative development as well as improving of the potential effectiveness of scientific and research products implementation).

The aim of the article is the conceptual approach grounding of the scientific and technical management of regional innovative development in order to ensure government efficiency in solving regional economic problems.

The conceptual seme of the scientific and technical management of regional innovative development includes the following stages:

- 1) analysis of a country scientific, technical and legal innovative development support;
- 2) analysis of a country innovative development programs;
- 3) elaboration of regional innovative development strategy;
- 4) formation of the scientific and technical managing mechanism of regional innovative development.

The developed conceptual approach to the scientific and technical management of regional innovative development allows to ensure the efficient performance of government institutions in the sphere of formation and implementation of regional innovative development strategy and regional innovative developing programs.
