

Abstract of the Article
«Program Selection of High-Tech Products of Aerospace Industry
Enterprises Development»
by Tyshenko D.O.

In some areas technological gap between Ukraine and the developed industrial countries requires bold, but at the same time, scientifically based government program that will improve scientific and technological potential of Ukraine, the share of high-tech products in total GDP. So, today the introduction of scientific and methodological means of the program selection, which are capable to provide high technology development and high technology production, are quite relevant both for the whole national economy of Ukraine and for individual companies.

The paper suggests matrix selection programs to develop high-tech products which will improve the development of high-tech products, especially in industries where products are a complex and technical biocybernetic system is used. Further research in this direction is connected with the development of methodological apparatus to assess the level of scientific and technical potential of certain industries, finance investment in high-tech production, category apparatus in the field of high technologies.
