

Abstract of the Article

“Methodological Approaches for Better Analyzing and Evaluating the Efficiency of the Use of Production Resources of the Enterprise”

by M. Pashkevych

The problems of improving the functioning of enterprises in Ukraine on the basis of methodological approaches for better analyzing and evaluating the efficiency of the use of production resources of the enterprise are examined in the article. Conditions of necessity to implement the policy of innovative development of enterprises together with the objectives to save the production resources are placing some new demands on theoretical and methodological approaches, tools of implementing the integrated evaluation of resource use in the process of products manufacture and optimization of their structure on this basis at the enterprise. Thus, the topic of the research is relevant and timely.

The important task of management the economic development of the enterprise is solved in the research work. Proposed in this work methodological approaches for analyzing and evaluating the efficiency of the use of production resources are the basis for effective influence on the production process and operation of the enterprise as a whole because the impact of each type of resource on the volume and quality of products, as well as the value of each type of resource in the total amount of the resources used in the production are taken into account in these approaches. The improved methodological approaches provide an integrated approach to the problem of enterprise resource management, implementation of the necessary structural changes, and prediction future development of the enterprise.

The study is based on the existing norms of Ukrainian legislation. The article contains the interesting information about enterprise economic management in the conditions of unequal influence of production resources on the volume of output and quality of the products.
