“The Mechanism of Public Administration of Scientific, Technical and Innovation Development of Ukraine’s Regions”

by E.V. Ponomarenko, O.V. Annenkova

In a globalized world the development of national economy is characterized by the development of innovation processes both at national and regional levels. Insufficient development of innovative activity in Ukraine is stipulated by: a lack of appropriate instruments, approaches and methods of the innovation process, effective regulatory framework; a lack of effective innovation structure, imperfection of managing and control systems of communication with subjects and objects of scientific and technical activities. The aim of the present paper is to develop a theoretical approach to the establishment of public administration mechanism of scientific, technical and innovation development of regions on the basis of deepening market transformation processes in Ukraine subject to the current economic situation of the country.

One of the important issues is the development of a mechanism for public administration of scientific, technical and innovation development of Ukraine’s regions. The above mentioned mechanism involves the following steps: 1) to determine the role of innovation system in different countries; 2) to ground the formation of innovation structure at regional level; 3) to develop a mechanism of public administration of scientific, technical and innovation development of Ukraine’s regions.

The implementation of public administration mechanism of scientific, technical and innovation development of regions will enable the following: to strengthen scientific and technical activities at regions enterprises by increasing funding for their innovative activity; to integrate research and development into a global innovation system; to promote competitiveness of advanced technology products.

The practical value of the research is to use theoretical propositions of the mentioned mechanism in the development of scientific, technical and innovation spheres of Ukraine's regions. Prospects for further development are seen in the development of methodological approach to the formation of a mechanism of scientific, technical and innovation development of Ukraine's regions.
