

Abstract of the Article
"Methodology of Evaluating the Quality
of Passenger Transportation in Rural Areas"
by G. Rodashchuk

The problem of transportation in rural areas is quite an urgent problem even today, when many routes of passenger transportation are fulfilled from any settlement of Ukraine.

But above all, this applies to the routes of passenger transportation mostly in cities, and rural residents do not always have possibility to get to the desired destination easily and quickly.

Nowadays the problems of passenger transportation in rural areas are left relatively little studied and still poorly worked out. The main requirements for passenger transportation in rural areas are to ensure uninterrupted public service in transportation.

The article describes a system of standards of passenger transportation by which the quality of passenger transportation in rural areas is evaluated.

The use of these standards of passenger transportation would serve the needs of passengers in trips better, manage the quality of service for passengers efficiently and use existing possibilities of means of passenger transportation more effectively.
